## RESEARCH INTERESTS

Language and memory processes in younger and older adults, specifically (a) the processes involved in comprehending, retrieving, and producing words, and (b) linguistic, cognitive, and non-cognitive factors that influence these processes. Areas of interest include real-world retrieval problems, such as: (1) tip-of-the-tongue states, (2) difficulties retrieving proper names, (3) interference from taboo and other emotional words during speech production, and (4) written errors such as the production of spelling errors and homophone substitution errors.
